FACULTAD DE INGENIERIA

How to get here ?

So far, you have…

- Define Quality Attributes to apply on architecture
- How to prioritize them and discover additional requirements
- Understand the need of Arch Patterns and Styles
- List steps for ADD, DDD and Assemblage to apply on pattern to create an architecture
- Go deep on defined Arch Styles and Patterns: Microservices and Sharding

Then, you miss…

- How to register our activity and decisions ?
- How to evaluate our work? Who?
- How to create an environment that people follow you?

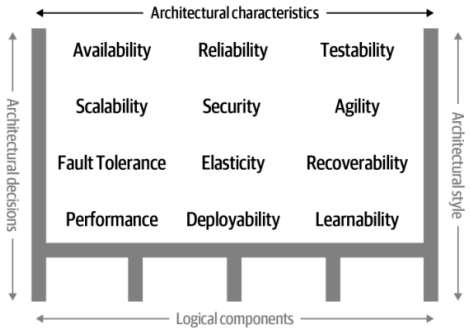

Expectations

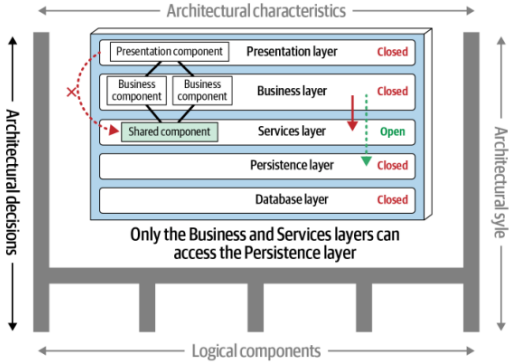

- Make architecture decisions
- Continually analyze the architecture
- Ensure compliance with decisions
- Keep current with latest trends
- Understand diverse technologies, frameworks, platforms, and environments
- Know the business domain
- Lead a team and possess interpersonal skills
- Understand and navigate organizational politics

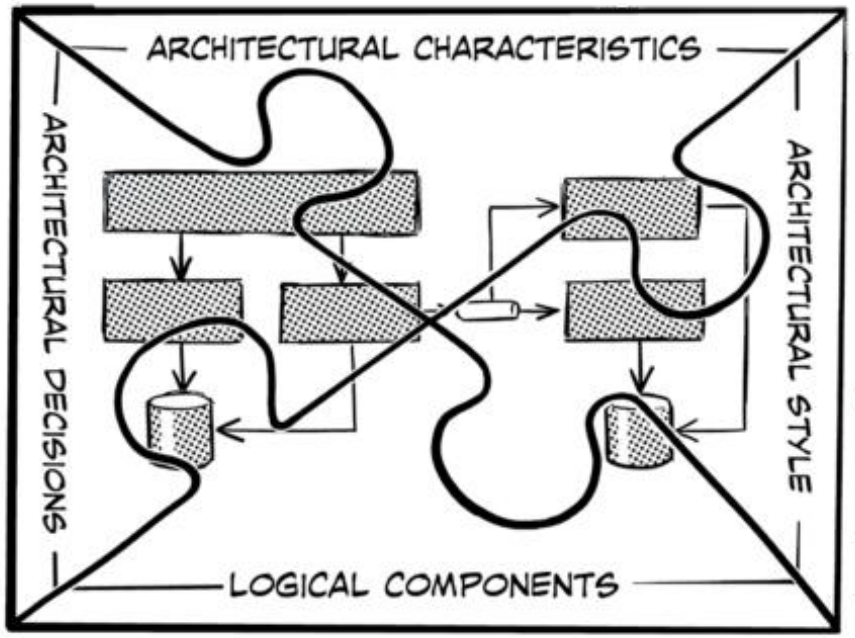

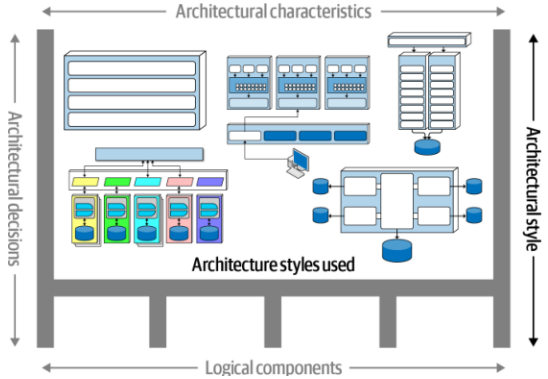

Leadership

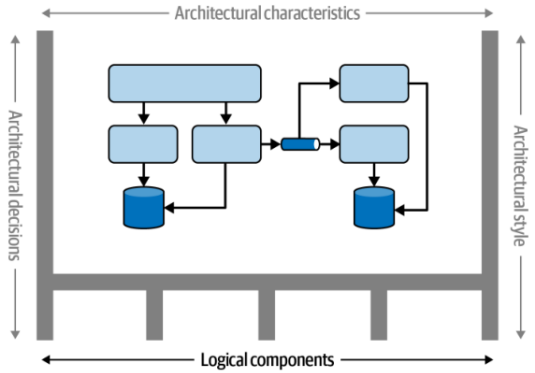

- Transparent
- Discipline
- Original

Architectural Decision Record, ADR

- Transparent
- Discipline

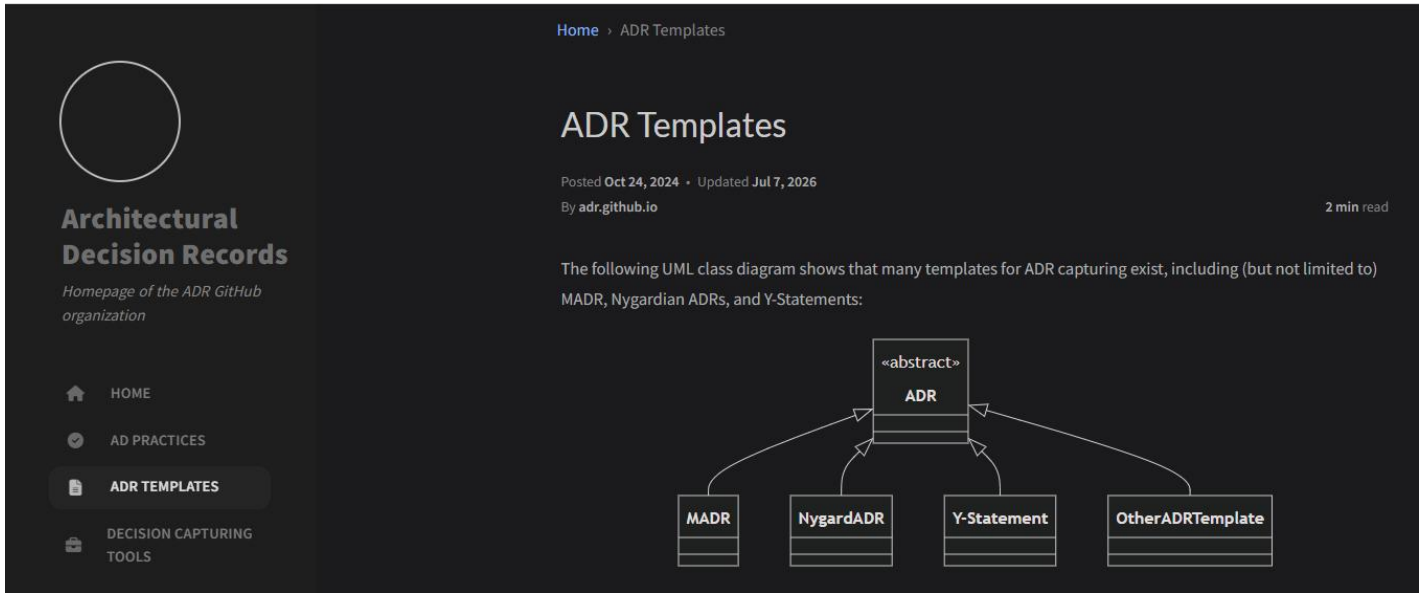

Why is important to keep a decision record ?

Hindsight bias (Juicio de la retrospectiva/*Sesgo del historiador*) criticize based on results only instead on the moment of taking the decision. (*Yo estaba alli…se seleccionó Salesforce por….*)

Document a decision based on:

- Needs/Requirements
- Context/Circumstances
- Consequences

Depends on depth, formality and consumers.

github.com/architecture-decision-record/architecture-decision-record

README | Code of conduct | License

Contents:

- What is an architecture decision record?
- How to start using ADRs
- How to start using ADRs with tools
- How to start using ADRs with git
- File name conventions for ADRs
- Suggestions for writing good ADRs
- ADR example templates
- Teamwork advice for ADRs
- Teamwork questions for ADRs
- Next step concepts for ADRs
- Architecture diagrams & views & viewpoints
- Fitness functions for decisions as code
- Decision guardrails for pull requests
- For more information

Templates:

- Decision record template by Jeff Tyree and Art Akerman
- Decision record template by Michael Nygard
- Decision record template by EdgeX
- Decision record template by arc42
- Decision record template for Alexandrian pattern
- Decision record template for business case
- Decision record template of the MADR project
- Decision record template using Planguage
- Decision record template by Paulo Merson

Programı

Contents:

- Summary

- Notes

Universidad de La Sabana
FACULTAD DE INGENIERIA

Culture eats strategy for breakfast

- Transparent

What is the competitive advantage of your company?

Is it helps to take decisions? No-obvious for a new hired.

Desmantelar la complejidad bancaria tradicional y democratizar el acceso financiero. → "Radical Simplicity & Humanize"

Dominar la logística e e-commerce ofreciendo la máxima velocidad. →"Frictionless Checkout & High Availability"

Are the ADRs on Arch Guidelines/ADKP/etc. are useful and updated, or a mandatory step ?

Is it can help for a fast decision? In an operative way? i.e. based on budgets (10k, 100k..5M)

Universidad de La Sabana
FACULTAD DE INGENIERIA

How you can evaluate it ?

- Discipline
- Original

Why do you evaluate?
Growth → Learning
Comparison → Employee Performance/Job Promotion/Provider-Service Selection (i.e. CRM every X years)
Pass a course…← Evaluation criteria, objective review

This isn't *the Spanish Inquisition.*

Level 1: Yourself (i.e. Tip about Interviews)
Level 2: Peer Review
Level 3: Outsiders (ARB or Consultancy/CSP), Objective Review?

Key Evaluation Activities

1. The reviewers individually ensure that they understand the current state of the architecture.
2. The reviewers determine a number of drivers to guide the review.
3. For each scenario, each reviewer should determine whether the scenario is satisfied
4. The reviewers capture potential problems exposed during the prior step.

- *The importance of the decision.* The
  be taken in making it and making sur
- *The number of potential alternatives.*
  spent in evaluating them.
- *Good enough as opposed to perfect.*

Universidad de La Sabana
FACULTAD DE INGENIERIA

ATAM and its adaptation

TABLE 21.2 ATAM Phases and Their Characteristics

Phase	Activity	Participants	Typical Cumulative Time
0	Partnership and preparation	Evaluation team leadership and key project decision makers	Proceeds informally as required, perhaps over a few weeks
1	Evaluation	Evaluation team and project decision makers	1–2 days
2	Evaluation (continued)	Evaluation team, project decision makers, and stakeholders	2 days
3	Follow-up	Evaluation team and evaluation client	1 week

Source: Adapted from [Clements 01b].

Ph1-2:
1: Present the ATAM
2: Present the Business Goals
3: Present the Architecture
4: Identify the Architectural Approaches
5: Generate a Quality Attribute Utility Tree
6: Analyze the Architectural Approaches

Ph2:
7: Brainstorm and Prioritize Scenarios
8: Analyze the Architectural Approaches
9: Present the Results

Outputs
- A concise presentation of the architecture
- Articulation of the business goals
- Prioritized quality attribute requirements expressed as quality attribute scenarios
- A set of risks and non-risks.
- A set of risk themes
- Mapping of architectural decisions to quality requirements.
- A set of identified sensitivity points and tradeoff points.

"Inception" (ARB)

SAFe BY SCALED AGILE

LeSS

3a: General Arch and goes deep.
3b: View by Subject Area: *Compliance, Networking, Security, DB, Storage, Operations, LZ –as implicit-, etc.*
4: Impact on running projects
--
7: Timeline/Epics/PI and Team
8a: Agreement between SMEs/Decision Makers
8b: Detected Tech Debt or out-of-scope

Other Options:
LAE – Lightweight Architecture Evaluation
Spike Review (Peer Review)

[SAiP], Ch. 21

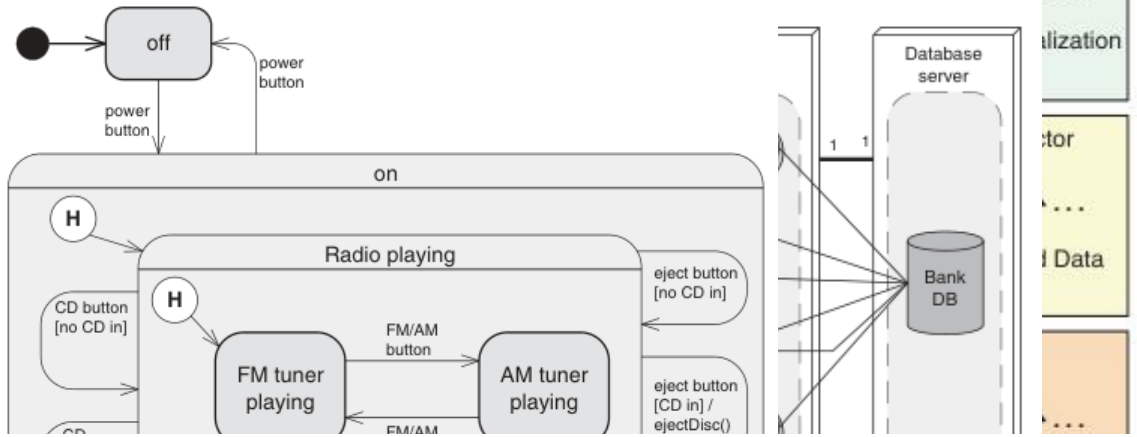

Universidad de La Sabana
FACULTAD DE INGENIERIA

How you can document it?

- Discipline
- Original

Why is important to keep a living documentation ? Arch doc serves..

- as a means of education.
- as a primary vehicle for communication among stakeholders.
- as the basis for system analysis and construction.
- as the basis for forensics when an incident occurs

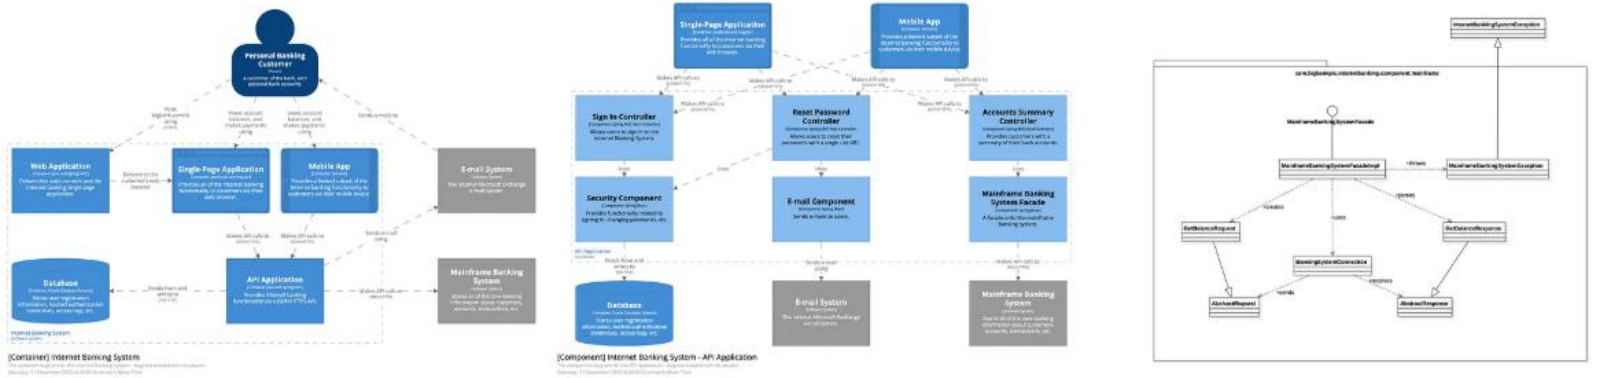

Notations:

Informal: Hand-written, mix of other types.
Semi-formal: UML, SysML.
Formal: Math semantic notation, ADL, ISO/IEC/IEEE 42010.

There are more options:
C4 Model, BPMN, ArchiMate, …

Depends on the platform scope, compliance, you have to go to Software Architecture Document (SAD).

C4 representations examples of Component | Container | Code

Architectural Katas

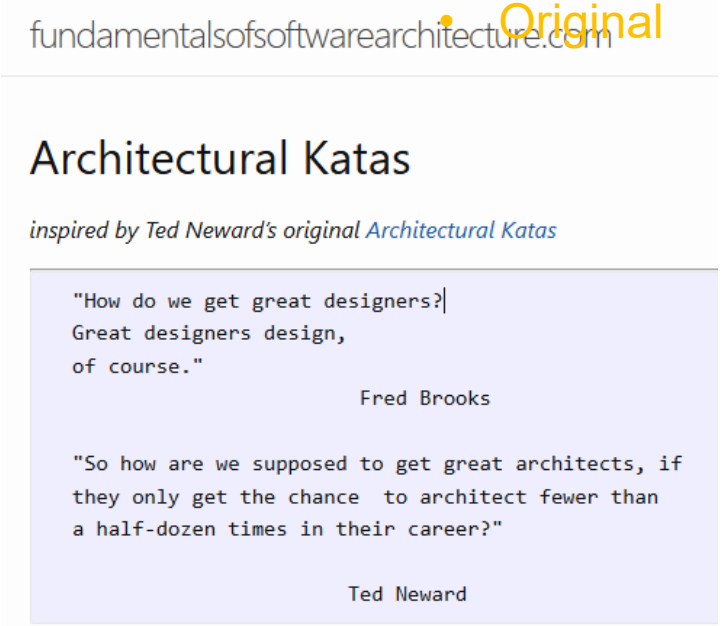

- Discipline
- Original

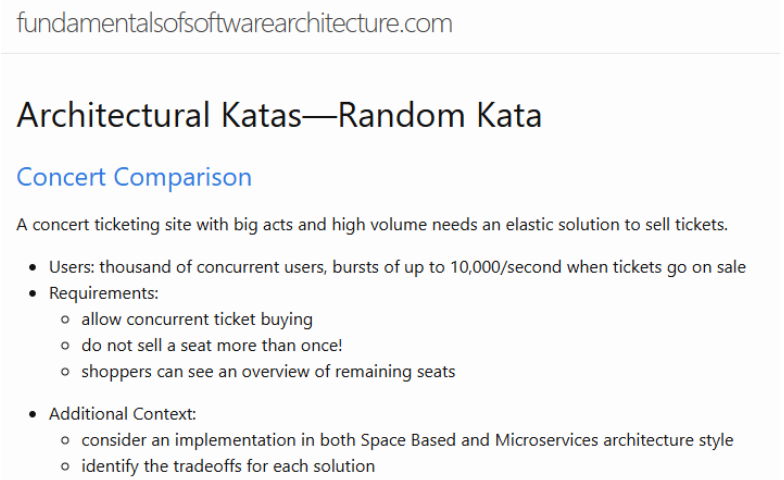

Gamification: Learning by playing

Pre-req:
Different (3-5 g) small groups (3-5 p).
Blackboard or virtual tools
-Opt- Previous project/RFP

Steps:

1. Give project/RFP and read it.
2. Questions to moderator.
3. Stablish rules: Min. Diagram (C2/C4, Deploy UML)
4. -Timing-
5. Explain to the other groups: Hard-but-fair questions, please **don't escalate to moderator.**
6. Voting
7. Next group…

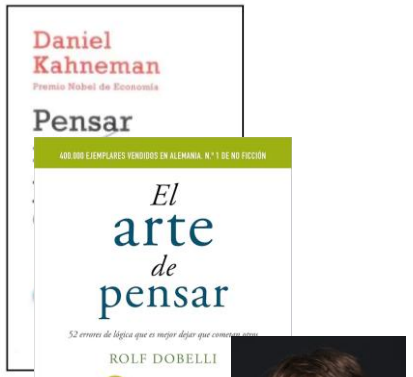

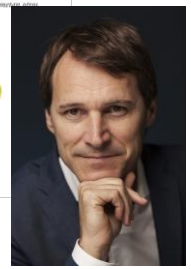

Universidad de La Sabana
FACULTAD DE INGENIERIA

Soft Skills

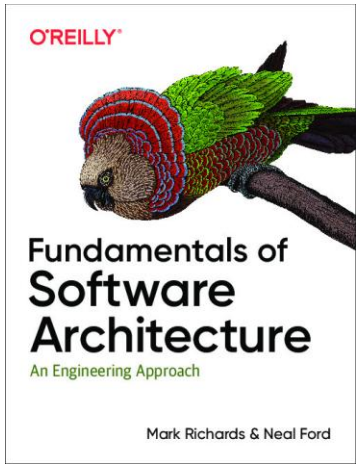

- Original

Gain experience carrying out the duties.

Apprenticeship is a productive path to achieving experience. Education alone is not enough, because education without on-the-job application merely enhances knowledge.

Improve your nontechnical skills.

Master the body of knowledge

	Performing other architecting duties	Sell the vision. Keep the vision alive. Participate in product design meetings. Give technical advice on architecture, design, and development. Provide architectural guidelines for software design activities. Lead architecture improvement activities. Participate in software process definition and improvement. Provide architecture oversight of software development activities.
Duties concerned with life-cycle activities other than architecting	Managing the requirements	
	Evaluating future technologies	
	Selecting tools and technology	
	Supporting the business	Understand and evaluate business processes. Translate business strategy into technical strategy. Influence the business strategy. Understand and communicate the business value of software architecture. Help the organization meet its business goals. Understand customer and market trends.
	Managing the people on the architect's team	Build "trusted advisor" relationships. Coordinate. Motivate. Advocate. Train. Act as a supervisor. Allocate responsibilities.

Communication skills	Outward communication (beyond the team)
	Inward communication (within the team)
Interpersonal skills	Team relationships

Knowledge of architecture concepts

Knowledge of software engineering

Design knowledge

Programming knowledge

Specific technologies and platforms

General knowledge of technologies and platforms

Domain knowledge

Industry knowledge

Business knowledge

Leadership and management techniques

Soft Skills

Why do you don’t show your PoC/PoV ?

Test yourself….what is your exposition ?

Do you use an accurate language ?

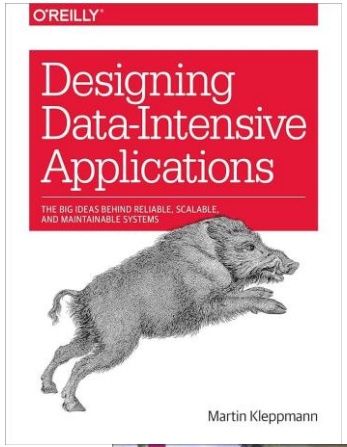

Do you thougths are out-of the box ?

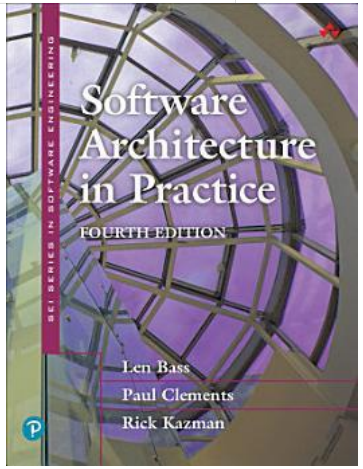

Can you explain your position and your interests easily ?
